SYNC MANAGER

The easiest way to sync data in Quick Base

The "hub n' spoke" example above shows an application housing a master table of resources. The resources are kept up-to-date in this application and synced across the other applications used by the organization.

ROBUST CAPABILITIES

- Can be configured to run in any interval down to a granularity of one hour. E.g. run every 1 hour or every 4 hours or every 1 day or every 1 week
- Secure authentication
- Individual syncs can be run manually by a pre-defined list of authorized users
- Sophisticated logging mechanism ensures you always know what is happening
- Detailed reports on exceptions as well as performance impacts
- Real-time alerts allow you to investigate and resolve any data issues that may surface during sync

OVERVIEW

The MCF Sync Manager is a fully-featured tool that allows Quick Base administrators to easily configure a "sync" between two or more Quick Base tables. These tables can exist in the same application or be in a separate application. With advanced logging and multiple settings, the synchronizations can accommodate virtually any scenario.

Some example scenarios include, but are not limited to: backing up data from a Production application to an archive, synchronizing data between a hub and spoke or keeping data in a development copy up to date with Production.

ABOUT MCFTECH

MCF Technology Solutions (MCFTech) delivers Services, Strategy, and Products to business customers worldwide. We focus on the successful development, deployment, and support of Business Applications for diverse teams. We believe the best solutions come from a sound business understanding and thoughtful application of technology. Our global footprint includes deployments in more than 20 countries as well as systems that touch nearly every corner of the business world.

We utilize a proven methodology, dubbed "The MCF Way" which has led to hundreds of successful engagements. It is an iterative, customer-centered methodology based on extensive experience with leading software development, business process, and project management practices.
