

QUICK BASE BACKUP TOOL

Extract Data tool

ROBUST CAPABILITIES

- Create a folder structure using application name as the main folder and table names for sub folders.
- Multiple extract file formats: XML, CSV, Pipe.
- Easily activate/inactivate tables to be extracted.
- Accessing target applications with the use of a User Token, no credentials needed.
- Big data? No problem. The tool divides and conquers by downloading data in chucks and saves it in a single file.
- Schedule extracts using Windows Task Scheduler with no human interaction needed.
- Capable of compress (Zip) and upload into an SFTP once the data extraction has been completed.

OVERVIEW

Quick Base Backup Tool extracts data from different tables housed in different apps in one simple run. It can manage big data sets from large number of records to huge number of fields in one table (or both). MCFTech developed this export tool for clients that were looking to extract/backup big data sets from multiple Quick Base applications. Due to data export restrictions in Quick Base, big data sets cannot be extracted without fragmenting the data into multiple batches ending with numerous files to manage and with the risk of potentially losing data.

COMMON USE-CASES:

- When the dataset is too big for Quick Base to export it, our backup tool can.
- Offline Backup.
- Data migration: extract the data out of Quick Base without a hassle, in XML or CSV.

ABOUT MCFTECH:

MCF Technology Solutions delivers Services, Strategy, and Products to business customers worldwide. We focus on the successful development, deployment, and support of Business Applications for diverse teams.
