

QUICK BASE EXPORT TOOL

Back up File tool

ROBUST CAPABILITIES

- Creates a folder structure using the application name as the main folder and table names for sub folders.
- Allows metadata from the Quick Base record where the file is stored.
- Extracts previous version of files.
- In case of connectivity issues our tools are capable of resuming the extraction right where it left off.
- Can rename files from the source record data while downloading them.
- If the file names saved in Quick Base are the same, the tool adds a number at the end of the file name to prevent overwriting files.
- Captures metadata from the files extracted (only for current versions).

OVERVIEW

The MCF Quick Base Export Tool extracts files from different tables housed in different apps, one file attachment field at the time.

Best of all, it can download a large number of files very quickly.

MCFTech developed this export tool for clients who need to backup their files from Quick Base to their hard drive.

COMMON USE-CASES:

- Pulling large number of files out of Quick Base in order to migrate them to a different storage system.
- Offline Backup of files for long-term storage.
